

TIO EASY CHAIR SEAT PAD

Tio Easy Chair Seat Pad

Fabric Supplier

Specifications

Width: 450 mm

Depth: 490 mm

Information

Year: 2009

Product image may differ from your selection.

Description

A seat pad available in plenty of fabrics to accompany the popular Tio Easy Chairs.

Instructions

For cleaning of the fabric/leather, see instructions related to the specific fabric/leather in use.

Instructions for Fabric

Light hoovering should be done each week, as it extends the durability of the fabric. Major cleaning should also be done annually, in order for the fabric to be protected in the best way. Cleaning the fabric regularly is important not only from an aesthetic standpoint, but also in order to preserve the fabric's flame-retardant properties, as dirt affects the flame retardant negatively. It is best to use professional help for cleaning, and always follow the manufacturer's instructions carefully. When using shampoo and stain remover, they should always be tested on an invisible part of the furniture before they are used. Remember that the fabric should only be dampened when cleaning, not soaked. If something is spilled on the upholstery fabric, it is best to remove the stain as quickly as possible. Most stains disappear if they are treated immediately and not allowed to dry. Superficial stains are quickly removed if they are immediately wiped off with a damp sponge or cloth. For dried stains first, wipe up all surplus liquid and semi-attached particles with a white absorbent serviette or cloth. Never use a coloured serviette because it can come off onto the fabric! Scrape up attached particles with a spoon or knife blade – work from the edges of the stain and inwards to prevent spreading. If the stain is small, it will suffice to dab it with a damp sponge. Be careful that the sponge is not too wet because the fabric need only be dampened. To avoid a ring forming after the stain, it is important to start from the outside and work inwards. Never rub to try to remove a stain. If the fabric has been treated to provide a water- and dust-repellent surface, no cleaning agent should be used when removing stains except warm water. Cleaning agents and/or excessive mechanical abrasion can degrade the repellent effect. If the stain still remains after a second and third attempt, we recommend using professional help.
